PROFESSIONAL SUMMARY

Full Stack .NET Engineer with 3 years of experience designing and delivering scalable enterprise applications across Finance, Healthcare, Education, and Construction domains using C#, ASP.NET Core Web API, Entity Framework Core, SQL Server, PostgreSQL, and React.js. Hands-on with RESTful APIs, Microservices, Clean Architecture, JWT and OAuth 2.0 authentication, Docker, and CI/CD with GitHub Actions. Proven record of SQL performance tuning — cut a financial balance sheet report from 2.5 minutes to 8 seconds — plus legacy refactoring and mentoring junior developers on production systems serving 2,000+ daily users.

CORE TECHNICAL SKILLS

Languages: C#, TypeScript, JavaScript, SQL (T-SQL)

Backend: .NET Core, ASP.NET Core Web API, Entity Framework Core, LINQ, Dependency Injection, SignalR, RESTful APIs

Architecture & Patterns: Microservices Architecture, Clean Architecture, Repository Pattern, CQRS, MediatR, API Gateway, Event-Driven Design (Kafka), Multi-Tenancy, System Design, SOLID Principles, OOP, Design Patterns

Frontend: React.js, Redux Toolkit, HTML5, CSS3, Tailwind CSS, Bootstrap, Material UI

Databases: SQL Server, PostgreSQL, MySQL, Redis, MongoDB — Stored Procedures, Query Optimization, Indexing

Security: JWT Authentication, OAuth 2.0, Role-Based Access Control (RBAC)

Testing & API Docs: xUnit, Moq, Unit Testing, Integration Testing, Swagger/OpenAPI, Postman

DevOps & Tools: Docker, Git, GitHub, GitHub Actions (CI/CD), Linux (Ubuntu) server deployment, Azure Fundamentals (AZ-900 — in progress)

Practices: Agile/Scrum, Code Review, SDLC, Mentoring

PROFESSIONAL EXPERIENCE

Associate Full Stack Engineer — BoscoSoft Technologies Pvt Ltd

Yelagiri Hills, Tamil Nadu, India | Oct 2023 – Present

- Delivered 20+ features across 4 enterprise projects spanning Finance, Healthcare, Education, and Construction domains, owning 1–2 critical modules per project in Agile teams of 3–18 developers.
- Currently building RebarPro, an enterprise Bar Bending Schedule (BBS) execution and rebar production platform for a leading construction and infrastructure client; own the Store & Yard Inventory module end-to-end, developing .NET microservices (Clean Architecture, PostgreSQL) and React + TypeScript modules for BBS planning, production tracking, and material request workflows.
- Developed loan disbursement and repayment modules for MicroFUND, a microfinance platform, using ASP.NET Core Web API, Entity Framework Core, and SQL Server; optimized stored procedures and LINQ queries, cutting balance sheet report generation from 2 minutes 30 seconds to 8 seconds (~95% faster).
- Built and maintained Out-Patient (OP), In-Patient (IP), ward management, appointment scheduling, and patient visit modules for a Hospital Management System serving ~2,000 patients daily at one of Bangalore's busiest hospitals, ensuring high reliability for business-critical production workflows.
- Served as technical point of contact for the team; diagnosed and resolved 50+ production bugs and data-integrity issues, including dashboard and report mismatches against live transactional data, restoring accuracy of business-critical reporting through debugging and query tuning.

- Developed academic workflow and student management features for a school administration platform, delivering scalable backend components and reusable module design.
- Refactored legacy codebases to Clean Architecture and SOLID principles, improving long-term maintainability and reducing regression risk across projects.
- Owned features end-to-end across the SDLC — design, development, unit testing (xUnit), code review, and deployment via GitHub Actions CI/CD pipelines to self-managed Linux (Ubuntu) servers.
- Mentored interns and junior developers through internal training programs, simplifying complex technical concepts for beginners.

PERSONAL PROJECTS

E-Commerce Microservices Backend — .NET 10, Docker, Kafka

- Designed a high-performance distributed microservices backend inspired by large-scale e-commerce platforms: API Gateway, JWT authentication and authorization, and event-driven communication over Kafka, structured with Clean Architecture and CQRS and containerized with Docker.

Multi-Tenant Ticketing System (Mini Jira) — ASP.NET Core, React

- Built a SaaS issue-tracking platform where organizations register, manage users, and track tickets and feature requests, implementing full multi-tenancy with secure tenant isolation and role-based access control (RBAC).

Object Storage System (Amazon S3-inspired) — ASP.NET Core Web API

- Designed a custom object storage platform supporting file upload/download, object management, and storage abstraction with a focus on scalable architecture.

Password Manager (Bitwarden-inspired) — .NET (MVC)

- Built a secure password management web application implementing end-to-end encryption concepts, JWT-based authentication, and encrypted vault management.

High-Speed RDBMS Data Transport Platform — .NET, SQL Server, PostgreSQL, MySQL

- Developed a web application for fast transfer of relational database objects between servers, enabling migration, synchronization, and optimized bulk data processing.

EDUCATION

Master of Computer Applications (MCA) | Alagappa University, Karaikudi, Tamil Nadu | 2023 – 2025

Bachelor of Computer Applications (BCA) | Don Bosco College, Yelagiri Hills, Tamil Nadu | 2020 – 2023

CERTIFICATIONS

- Microsoft Full-Stack Developer Professional Certificate — Microsoft (Coursera)
- Microsoft Back-End Developer Professional Certificate — Microsoft (Coursera)
- Back-End Development with .NET — Microsoft (Coursera)
- Microsoft Certified: Azure Fundamentals (AZ-900) — in progress

LEADERSHIP & EXTRACURRICULAR

- Frequently served as technical lead and immediate point of contact within the team, taking ownership of critical tasks and guiding teammates.
- Active participant in inter-college and intra-college technical competitions, coding events, and workshops.
